

Year 2004 Projects

Project Name	Activity	Project Description	Habitat Type	Acreage	Linear Miles
BES Revegetation Program, Columbia Slough Watershed	Enhancement	Multiple sites of revegetation including wetland and riparian restoration.	Riparian	25	
Brooks Slough	Protection	Columbia Land Trust and Ducks Unlimited will conserve and restore more than 260 acres of diked and drained pasture. The goal is to reconnect the river with its historic floodplain and restore 150 acres of estuarine wetlands and over 100 acres of riparian forest habitat.	Riparian	260	
Crims Island	Protection	The Columbia Land Trust acquired 426 acres and USFWS acquired an additional 90 acres on Crims Island. The Corps of Engineers would provide funding to enhance 75 acres of tidal emergent marsh by excavating canary grass wetland and connecting subtidal channels to the mainstem Columbia. In addition, tidal flow will be reestablished to 100 acres of wooded swamp by excavating a man-made plug in a channel and 100 acres of riparian forest would be reestablished on upland areas of the island.	Riparian	516	
Elledge-Sauvie Island Private Land	Establishment	The project involved installing an aluminum water control structure designed to allow tidal flows to enter the wetland, but not escape. The structure will also maintain water levels during spring to promote native vegetation response for waterfowl and other wildlife, including endangered salmon.	Riparian	50	
Gray's Bay Area Conservation/Restoration Project	Protection	Columbia Land Trust has acquired nearly 600 acres on five properties in gray's bay. Restoration will include removing tidegates, breaching dikes, restoring historic channel contours and revegetation to spruce swamp and other native plant communities.	Riparian	594	
Sandy River Delta	Enhancement	40 acres of site preparation and revegetation-this phase is part of a multi-year restoration of floodplain and forest wetland habitat on the 150 acre site.	Riparian	40	
Sauvie Island Wildlife Refuge-Dead Willow	Establishment	Restoration involves installing water control atructures in drain ditches to restore emergent wetlands	Riparian	70
